

MICROSCOPIC HEMATURIA

Reviewed and approved, June 2012

This protocol is a general guideline and does not represent the professional standard of care required of the health care provider.

This pathway should be modified as indicated, based on the health care provider's professional judgment, to meet the needs of individual patients.

Microscopic Hematuria

Microscopic Hematuria

Workup: Obtain

- UA, UC; perform three (3) consecutive UAs within one month
- Perform 2-3 spot urine collections for Calcium/Creatinine ratio

When and Where to Refer:

- If Ca/Creatinine abnormal, but not overwhelming, clinical evidence of stones, refer to Urology or Nephrology; otherwise, for significant proteinuria or hypertension, Urology suggests a *Nephrology*, rather than a Urology, consult.
- If problem persists for more than 30 days:
 - Order a renal/bladder ultrasound;
 - If results are negative, refer to Nephrology;
 - If results are positive, refer to Urology.
